## **Roots presents IBC technology at prestigious Agrinvest event**

- **Roots has presented its Irrigation by Condensation (IBC) technology at the 2019 Agrinvest event in Tel Aviv**
- **Roots was a finalist in the 'Best Agtech company' category**
- **Agrinvest provides exposure to international agritech investors**

**Roots Sustainable Agricultural Technologies Limited (ASX: ROO, Roots or Company)** has presented its world-first Irrigation by Condensation (IBC) technology at the prestigious Agrinvest event in Israel.

Roots' IBC technology was selected to present in the 'Best Agtech company' category to an independent committee of Israeli business and industry leaders, international investors and government representatives.

Roots' IBC system was specifically designed to enable small and medium scale farmers to grow entire food crops using irrigation sourced only from humidity in the air, even in remote semi-arid areas. Roots' solar operated and electric driver IBC systems have successfully completed proofs of concepts on nine crops, including grapevines, young avocado trees and sorghum.

Agrinvest is one of the biggest events in Israel for agtech, bringing together hundreds of investors and global agriculture experts. Companies from more than 20 countries attended this year's conference, showcasing the interest in agricultural technology.

Roots co-founder and Executive Director, Boaz Watchel, said "Being selected to present at a leading agricultural conference is a testament to the quality of our technology in enabling crop production using only humidity from the air. Our world-first IBC technology addresses water and electricity challenges affecting farmers and producers globally, including in semi-arid and drought-affected areas.

"Feedback from conference attendees has been positive and we are initiating discussions with interested international delegates."

**About Roots Sustainable Agricultural Technologies Ltd:**

Israeli-based, Roots Sustainable Agricultural Technologies Ltd. is developing and commercialising disruptive, modular, cutting-edge technologies to address critical problems being faced by agriculture today, including plant climate management and the shortage of water for irrigation.

Roots has developed proprietary know-how and patents to optimise performance, lower installation costs, and reduce energy consumption to bring maximum benefit to farmers through their two-in-one root zone heating and cooling technology and off the grid irrigation by condensation technology.

Roots is a graduate company of the Office of the Israeli Chief Scientist Technological Incubator program. More information [www.Rootssat.com](http://www.Rootssat.com)
